

Support Partner!

The Georgia Space Grant Consortium (GSGC) was established in 1989 to develop a statewide network of academic, industry, and non-profit partners dedicated to maximize the number of Georgia students from all backgrounds who are well-prepared in science, technology, engineering, and mathematics (STEM) fields and who are motivated to support space and aeronautics programs vital to this nation. GSGC reached out to our 6th Grade STEM Cohort, visited on-site, and educated the Cohort on aerospace engineering. Additionally, one of our Cohort educators went to Georgia Tech and provided support in education theory and pedagogy.
